

ARJUN BHARADWAJ RAVEENDRAN

+1 (647) 809-6467 | arjun01raveendran@gmail.com | [Linkedin](#) | Work Authorization: Canadian Citizen

PROFESSIONAL SUMMARY

Computer Science graduate from the University of Guelph (Fall 2025) who enjoys building software end to end, from machine learning pipelines to production web applications. Hands-on experience across full-stack development (React, TypeScript, Firebase), cloud infrastructure (AWS, Google Cloud), and automated testing.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript (React.js, Node.js), Java, C/C++, C#, SQL (PostgreSQL), Dart

Web & Frameworks: React.js, Next.js, Node.js, Vite, FastAPI, Flask, REST APIs, OAuth 2.0, Firebase (Auth, Firestore, App Hosting)

Cloud & DevOps: AWS (EC2, RDS, Lambda, S3, Amazon Bedrock), Google Cloud (Gmail API, People API, Secret Manager), Docker, Git/GitHub, multi-environment deployments (dev/beta/prod)

Machine Learning: Scikit-learn, XGBoost, LightGBM, TensorFlow/Keras, feature engineering, SMOTE, model evaluation, generative AI, prompt engineering

Testing & QA: Playwright, Selenium WebDriver, end-to-end test automation, Postman, manual QA, defect tracking, test case design

Data & Analytics: Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebooks, Google Analytics

PROFESSIONAL EXPERIENCE

Software Engineer Intern | BrickRed Systems, Vancouver, Canada May 2026 – Present

Technology consulting and IT services firm

- Built contact-import pipelines for a client CRM platform, supporting CSV uploads, LinkedIn exports, and Google Contacts sync through the People API, with deduplication across all three sources
- Integrated Gmail send and inbox sync using OAuth 2.0, and designed a provider abstraction layer to extend email support to Microsoft 365 through the Graph API
- Automated end-to-end tests for 11 core user flows with Playwright, bringing 10 to stable automated coverage, and wrote the engineering handoff documentation used by the team
- Work across development, beta, and production Firebase environments, managing credentials through Google Secret Manager to keep live customer data protected during releases

Executive Team Member | CXOwork, Seattle, USA May 2026 – Present

Marketplace connecting companies with fractional C-suite executives

- Develop and ship features for the company's production CRM platform in React, TypeScript, Vite, and Firebase (Auth, Firestore) within Git/GitHub team workflows
- Built Python and Selenium lead-generation crawlers that scan applicant tracking job boards for open fractional C-suite roles, delivering qualified lead lists with verified live postings to the marketing team
- Designed a resume-shortlisting engine that scores advisor candidates across 12 executive roles and 27 industries, producing ranked Excel reports with documented methodology
- Automated beta-advisor onboarding with a Node.js CLI that provisions accounts in batches and generates credential and login documentation for each run

Bell Wireless Consultant | Staples Canada Nov 2024 – Jan 2026

- Ranked Top 10 in district across 40+ retail locations for 8 consecutive months; awarded Staples Ignite Champion of the Month
- Conducted technical consultations with small-business and individual clients on wireless infrastructure and device ecosystems, translating technical specifications into clear business value

Tech Sales Specialist | Staples Canada Aug 2024 – Nov 2024

- Achieved Rank 1 in district within two months, generating \$100,000+ in revenue and 150+ protection-plan attachments through consultative selling
- Delivered end-to-end technical support and product advisory across the full device portfolio, including laptops, desktops, tablets, smart home devices, and peripheral accessories

Software Testing Intern | EzeePay India (Fintech)

Feb 2019 – Jun 2019

- Automated previously manual regression scenarios using Selenium WebDriver, improving coverage across critical payment-processing workflows
- Participated in the full QA lifecycle within an Agile fintech team: test plans, functional and regression execution, defect logging, and release sign-off

PROJECTS

Credit Card Fraud Detection System | Python, XGBoost, LightGBM, Scikit-learn, FastAPI, AWS Lambda

- Built an end-to-end ML pipeline detecting fraud in ~300K real credit card records (0.17% fraud rate), applying SMOTE and domain-specific feature engineering to overcome extreme class imbalance
- Trained Random Forest, XGBoost, and LightGBM models combined into a soft-voting ensemble, achieving ~87% F1 Score and ~97% ROC-AUC on held-out test data
- Deployed a FastAPI REST endpoint serving real-time fraud predictions with probability scoring, structured for AWS Lambda

DeveloperWeek 2025 Hackathon | React.js, Node.js, PostgreSQL, REST APIs (Feb 2025)

- Delivered a full-stack reselling-marketplace MVP in a 3-person team at one of the world's largest developer hackathons
- Architected the PostgreSQL schema (users, listings, bids, transactions), integrated third-party payment and OAuth APIs, and contributed across the Node.js backend and React.js frontend

TiffinBox: Student Food Marketplace | FlutterFlow, Firebase Firestore, Mobile/Web

- Designed and developed a cross-platform app connecting university students with home-cooked meal providers, using Firestore real-time data and a featured-placement revenue model

Pet Nutrient Tracking App | Figma, UX Research, MoSCoW Framework

- Produced a comprehensive Figma prototype with 90+ MoSCoW-prioritized test cases, user journey maps, and annotated wireframes for a pet diet and vet-scheduling platform

Flappy Bird Clone | Unity, C#, 2D Game Development

- Built a fully functional 2D game implementing real-time collision detection, gravity physics simulation, sprite animation, and persistent score tracking

EDUCATION

Bachelor of Computing | University of Guelph

Fall 2025

- Relevant coursework: Data Structures & Algorithms, Software Systems Development, Database Systems, Human-Computer Interaction, Software Quality Assurance, Operating Systems

CERTIFICATIONS

AWS: Building Generative AI Applications (Amazon Bedrock) | Foundations of Prompt Engineering | Planning a Generative AI Project | Amazon Q Developer

Other: Advanced Google Analytics | Introduction to Cyber Security (Cisco)
